

BROWNFIELD SOLUTIONS LTD

CRAIG CROFT & NORTH ARRAN WAY, SOLIHULL DEC 06- AUG 07

BSL were commissioned by a major regeneration partnership to carry out the Site investigation and reporting of two areas of North Solihull covering approximately 10 hectares, which have been designated for complete urban regeneration. The work comprised initial surveys and underground line service traces, followed up by detailed site investigations of both sites comprising boreholes, trial pits, plate bearing tests, groundwater, gas monitoring and soakaway tests for preliminary SUD designs. Work was undertaken in close liaison with the Local Authority and carried out to limit disturbance to the existing local community.

A full contamination and geotechnical assessment of the ground conditions was produced, including foundation proposals for new roads, infrastructure, schools and commercial buildings.
